**AMprover**® offers insight, overview and control.  
In this way you can manage your risks and save costs.

# What is AMprover®?

AMprover® is the innovative software package of Traduco that assesses and helps manage risks in your business processes. Our software offers insight, overview and control. If you know what the risks are and how you can manage them cost effectively, you improve your cost structure by optimising the performance of your assets. For example the cost effective management and maintenance of your buildings, installations, production lines, facilities, infrastructure or your total factory. But also the optimum safety and quality of people, environment and processes. With AMprover® you get a grip on all the facets of Asset Management.

## What is Asset Management?

Asset Management is a total view of the management and maintenance of your assets. If you apply this philosophy over the whole life cycle of capital investments, Asset Management contributes to the ultimate aim: obtaining an optimum return. To obtain the optimum return, you focus primarily on performance, risks and costs.

## Functionalities of AMprover®

AMprover® is user friendly, versatile and pioneering. The software functions extremely well within a cloud environment and links seamlessly with various maintenance management systems. But also closed information systems that focus on the basis of 'real-time data' on optimum management and maintenance of your assets. With AMprover® you can generate the widest range of reports in an instant. In addition it is easy to export the data for example to an Excel environment and vice versa.

With AMprover® you can carry out sensitivity and risk analyses. The software package gives an insight into availability,

reliability and total costs of your assets. The software also predicts what will happen in case of disasters and links various assets together. And that is far from all ...

- ✓ FMECA, RCM and Life Cycling Cost analyses
- ✓ RAMS analyses
- ✓ Risk Based Inspection (RBI)
- ✓ Priority box: to determine the right priorities

## Customer comments on AMprover®

“AMprover® gives us an insight into the actual costs within our organisation.”

“The ease of use, versatility, clear screen display: AMprover® makes it easy to understand your business processes and risks.”

“It is not difficult to carry out business analyses with AMprover®. And if there is something we cannot manage, the helpdesk is always there to help us!”

## Advantages of AMprover®
